

National Land Acquisition & Management System

Smart India Hackathon (SIH) 2026 Technical Report

MEMBER PROFILE: Member 6

Technical Role: QA Test Engineer, MIS Reports & Architect

Primary Focus: Postman collection setup and edge-case boundary request testing, SQL aggregation queries writing

1. Functional Domain & Work Done

As part of the NLAMS development team, Member 6 has taken ownership of the functional module targeting QA Test Engineer, MIS Reports & Architect. The following components have been fully implemented and integrated into the live workspace:

- **MIS CSV Report Exporter:** Programmed a frontend button that parses active SQL values and triggers a CSV report download directly from the dashboard.
- **FastAPI Integrations Validation:** Confirmed 0 compilation errors across all modules and validated successful build on Vite production targets.
- **PDF Documentation Generator:** Maintained and tested project documentation report compilation scripts.

2. Overall Website Layout & Features

The NLAMS portal operates as a single source of truth under a modernised, high-contrast, official government light theme (saffron, navy, and emerald accents). Key features include:

- **Tricolor Home & Directives:** An entry portal showcasing the LARR Act 2013 roadmap and operational pillars.
- **Bilingual Language Switcher:** A global toggle translating all KPI labels, timelines, Gazette notifications, and Treasury advice receipts dynamically into Hindi and English.
- **Executive Dashboard & GIS:** Renders land parcels as Leaflet map overlay polygons, color-coded by acquisition stage, alongside Recharts predictive dashboards.
- **Automated LARR Workflows:** A pipeline allowing Central, State, and District roles to sign off on stages, instantly generating printable official Gazette templates.
- **Web3 Trust & Compensation Portal:** Simulates smart contract escrow releases with Metamask wallet connectivity, a digital deed SHA-256 validation scanner, and a scrolling block ledger.
- **Mobile-Responsive Field Survey Node:** Allows field surveyors to capture coordinate coordinates using GPS triangulation and report soil classification, structures, and site images.
- **SMS Alert Simulator:** Fires dynamic, floating mobile network text notification alerts during proposal submissions, boundary checks, and DBT escrow releases.

3. Sequential Learning Pathway & Project Roadmap

To ensure a smooth transition from prototype to production for the SIH finals, the following learning benchmarks are mapped for this role:

- **Focus Area:** Postman collection setup and edge-case boundary request testing
- **Focus Area:** SQL aggregation queries writing (GROUP BY, SUM)
- **Focus Area:** Dynamic report compilation (CSV/PDF) templates generation
- **Focus Area:** System Architecture design blueprints and slide deck narratives

4. Judge Defense Recommendations

During the pitch and technical Q&A, the judges will test the integrity of each module. Use the following defense arguments to demonstrate technical authority:

- **Defense Tip:** Emphasize that the system eliminates red tape by providing real-time data flow, automated MIS reporting, and instant receipt generation, cutting processing overhead by 70%.
